# Satu Bumi

amazing glass fibre technology

## About Us

Satu Bumi is a high quality, Australian owned, Indonesian based manufacturer of Glass Fibre Reinforced Concrete (GFRC) consumer and commercial products.

## Why Indonesia

Satu Bumi chose Jogjakarta, Indonesia, for the location of its factory because:

- Indonesia provides a low cost of production base for labour intensive industries.
- The Indonesian climate is hot and humid which is perfect for the curing of GFRC products.
- Jogjakarta is well placed for international shipping with easy access to Singapore through Semarang which is essential for efficient and low cost transport.

## Glass Fibre Reinforced Concrete (GFRC) is a Great Product

GFRC is amazingly adaptable product that is perfectly suitable for the manufacture of pots, planters and garden décor for commercial applications including hotels, apartment blocks, office buildings and shopping malls with the following specific attributes:

- It can be designed to provide a myriad of different shapes, sizes and textures.
- It can be engineered to provide industrial grade structural strength for larger items.
- It can be made to resist water absorption which is important for water features and for protection against harsh weather conditions such as freezing temperatures.
- It enables the use of infused oxide coloring which is fade resistant in both high UV and generally harsh weather conditions.

## What We Do

Satu Bumi has an impressive product engineering team of artists and technicians that provide design and proof of concept services for those wanting GFRC products produced to their specific requirements based on the following principles:-

**“fit for purpose”** by being structurally sound and engineered for the intended purpose.

**“fit for transport”** by being strong, well packaged and designed from the ground up to maximize the capacity of shipping containers, and

**“fit for customer”** by being aesthetically appealing, long lasting and competitively priced.

## Why Us

Satu Bumi has a quality management team with many years of commercial experience. The advantage for our customers is that we recognise the need for solid business systems and quality control. We believe that this forms the basis for long term commercial relationships.

With approximately 160 staff and 9,200 square meters of production, warehousing, administration and logistics space at our facility in Jogjakarta, Indonesia, Satu Bumi can handle both large and small volume orders comfortably and reliably.

## The Process

### Initial Meeting

We discuss the relationship with you to see if it is a good fit for both parties.

### Information Gathering & Brief

The needs and requirements of your project are discussed, documented and agreed.

### Design Development

We provide structural design drawings, pricing and packaging for transport options.

### Guarantee

We provide a 100% guarantee on all workmanship and quality.
