## Integrated Concrete Colours Used

Caramel

Iguana

Kalgoorlie

Sundance

You can choose any colour from a whole range of integrated colour options off the CCS colour chart. These colours are achieved by adding oxide pigments to the GRC slurry prior to it being added to precast molds in the production process. The additional cost of these optional integrated colours varies depending on the colours chosen and their pricing can be provided upon request. The advantages of integrated colouring options are that they don't change the natural concrete appearance of GRC, and superficial damage doesn't expose a different colour substrata.
