CSL OPENS NEW GLOBAL HQ  
IN AUSTRALIA, MELBOURNE,  
VICTORIA

## Key Participants

Owner	CSL - <a href="http://www.csl.com">www.csl.com</a>
Project Manager	Roberts Co. – <a href="http://www.au.roberts.com">www.au.roberts.com</a>
Landscaping Contractor	Living Landscapes – <a href="http://www.livinglandscape.com.au">www.livinglandscape.com.au</a>
GRC Manufacturer	Satu Bumi (Australia) – <a href="http://www.satubumi.com.au">www.satubumi.com.au</a>

## Project Background

After four years of planning and construction, CSL's new Global Headquarters and Centre for R&D has opened its doors at 655 Elizabeth Street in the heart of Melbourne's biomedical precinct to welcome the first of 850+ employees who will work in the 18-story building.

CSL is a global biotech company with business units that include CSL Behring, which makes medicines for rare and serious diseases; CSL Seqirus, which develops and manufactures vaccines; and newly acquired CSL Vifor that specialises in iron deficiency and nephrology (kidney care.)

CSL's impressive new Global Headquarters will enable it to collaborate with its external partners, access the best resources available to improve its research and development and to optimise technological advances for the good of patients and public health.

## Satu Bumi's Involvement

Satu Bumi was engaged by Robert's Co. to manufacture and supply sixty-one highly customised GRC (Glass Fibre Reinforced Concrete) bench-planters and planters for the street scape of the outside of CSL's new high rise head office. The various GRC elements of the project required different combinations of curved GRC ends, stainless steel skateboard stoppers, metal seating inlays and imbedded ferrules for the attachment of raised metal surrounds.

Roberts Co. is a 100% privately owned boutique tear one construction company that has an enviable reputation for quality, innovation, and employee diversity.

The GRC elements of the project supplied by Satu Bumi were installed by Living Landscapes, an award-winning landscape construction company with over thirty years of industry experience. Living Landscapes have installed Satu Bumi GRC street furniture and GRC planters on several landscaping projects and have consistently brought a high level of excellence and professionalism to each one of them.

*This project displayed Satu Bumi's ability to manufacture customised GRC planter-benches to suite the aesthetic and function requirements of a public space fit out. All the planters were manufactured with high commercial grade GRC (Glass Fibre Reinforced Concrete) using Satu Bumi's CityScape technology with a smooth finish.*
